

Product and services roadmap

A look ahead at what we're building and enhancing

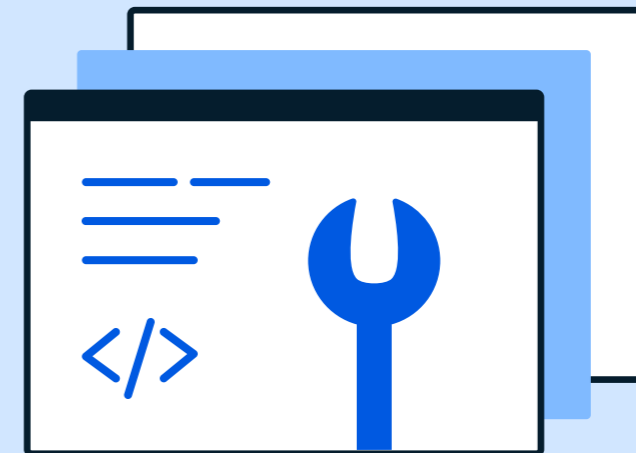

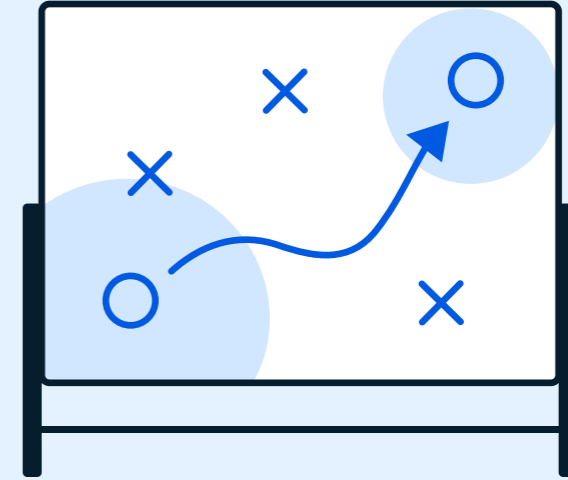

April 2026

Our roadmap

At Silverstripe, we're committed to evolving our platform, products and services to meet the changing needs of our customers and partners. This roadmap outlines exciting developments across our product ecosystem, supporting our mission to deliver trusted, user-centric digital services.

Although these features are currently on our roadmap, please note that this roadmap is subject to change and should be used as a rough guide to what is coming up next. Quarters are aligned with our financial year from 1 April 2026 to 30 March 2027.

Silverstripe CMS

In order to continuously provide a great content editing experience, we currently have initiatives in place to boost the performance and accessibility of the CMS, while also providing new features that cater to content editors.

FY26 Q3

Performance improvements

Performance improvement within the CMS, rather than within specific applications.

Complete

Non-blocking sessions

Replaces blocking sessions and allows multiple concurrent requests to be completed for the same person in the same browser.

Complete

FY27 Q1

Last saved

Allows editors to view how recently a page being edited has been saved, reminding them to save their in progress work.

Complete

Duplicate blocks

Duplicate existing blocks and move these to different pages.

Complete

In-CMS accessibility improvements

Determine and deliver a valuable set of accessibility improvements to the CMS itself.

Partially complete & ongoing

FY27 Q3

In-CMS user support documentation

In-CMS user documentation or guides to support customers to understand what's available and how to make it work.

In progress

Silverstripe CMS modules

This section highlights our ongoing work to extend the capabilities of Silverstripe CMS through modular enhancements. These modules are designed to address evolving user needs, improve editorial workflows, and support more flexible, scalable digital solutions. Each initiative reflects our commitment to delivering targeted improvements that enhance the CMS experience and can be integrated as needed to suit your project requirements.

FY26 Q2

Headless: Phase 1 — Foundations

Establish the core headless module, enabling centralised content management and distribution, flexible data exposure, and scalability through extensible data models.

Complete

Headless: Phase 2 — API Fortification

Apply structured API versioning and configurable API sets to ensure security, stability, backward compatibility, and scalable support for multiple consumers.

Complete

FY26 Q3

Headless: Phase 3 — Content creation flexibility

Introduce a UI for content authors to define and manage their own data models, enabling greater flexibility and autonomy.

Complete

Headless: Phase 4 — Access control & API trust layer

Ensure secure and permission-aware API delivery.

Complete

FY26 Q4

Edge Cache — Module creation, sponsorship, and maintenance

The Edge Cache module helps you take full advantage of your Content Delivery Network (CDN) layer while giving content administrators greater control over caching.

Improve site performance, reduce load on your infrastructure, and speed up content delivery by managing cache behaviour at the edge. This module introduces tools to selectively purge, bypass, or extend cache for specific pages or assets—all from within the CMS. Empower editors to respond faster to content updates without developer involvement, while maintaining a high-performing, scalable website.

In progress

AI meta tag generator module

An AI-assisted module that suggests SEO meta tags (titles, descriptions, keywords) based on page content. Authors review and approve suggestions, improving consistency and search performance while reducing manual effort.

Complete

FY27 Q1

A/B testing module

Optimise content through data-driven experimentation.

The A/B Testing Module allows editors to create and manage content variants directly within the CMS, enabling controlled experiments to compare different headlines, layouts, calls to action, and more.

Complete

Subsites — Module sponsorship and maintenance

Allows you to manage multiple sites or sections from a single CMS. Easily separate content, users, and domains while maintaining centralised control. Run all sites on shared infrastructure and a single codebase to reduce costs and simplify maintenance. Build features, once, and reuse them across your main site and all subsites.

In progress

Headless: Phase 5 — CMS UI enhancements

Enhance the headless authoring experience with improved visual tools, streamlined navigation, and contextual editing directly within the CMS. This phase focuses on making model management, API configuration, and content relationships more intuitive for editors —reducing developer dependency and empowering teams to manage structured content with ease.

In progress

FY27 Q2

Tone/style adjuster

An AI-assisted module that helps authors rewrite content to match a defined brand voice or stylistic prompt, either field by field or across broader sets of content. It improves consistency and editorial quality while reducing manual effort through guided rewrites, in-place updates, and review workflows.

In progress

Generative drafting

An AI-assisted module that helps authors generate draft page content from prompts to support early content creation and reduce writer's block. It improves author efficiency and speeds up content production while keeping authors in control of review, editing, and final approval.

In progress

AI enhanced translations

The AI Enhanced Translations module streamlines multilingual content creation by integrating AI-powered translation services directly into the CMS.

Reduce manual effort and accelerate time-to-publish by generating draft translations for pages, blocks, and fields with a single click. Editors retain full control—reviewing, editing, and publishing translations as needed—while benefiting from the speed and consistency of AI. This module helps organisations scale their localisation efforts efficiently, making it easier to reach and engage global audiences.

In progress

FY27 Q3

SSO module — Module sponsorship and maintenance

Module sponsorship — The SSO (SAML) module enables seamless Single Sign-On integration.

Allow users to authenticate across multiple systems with one set of credentials, improving security and simplifying access management.

Scheduled

Hosting

We're always working to improve our platform that we host websites on. This section focuses on the infrastructure and tooling we maintain to reliably host Silverstripe websites. It includes ongoing improvements to the underlying platform, such as deployment processes, security hardening, and performance optimisation to ensure a stable, efficient, and secure environment for our digital services.

FY26 Q1

Improved deployments

Modernises the EC2 instance replacement process, enhancing deployment efficiency, and eliminating the need for outdated manual commands.

Complete

Better build AMIs

This work is focused on the release of tailored Amazon Machine Images (AMIs) for different layouts and environments, ensuring they are tested and ready for production.

Complete

FY26 Q3

Encryption at Rest

Enhanced data security through implementing AWS encryption at rest for RDS (databases) and EFS (file systems) on the Silverstripe Cloud platform

Complete

Replace session store

Replacing the session store improves platform security as well as reducing dependencies.

Complete

Silverstripe CCL platform retirement

Retiring Silverstripe's platform infrastructure on CCL ensuring proper dependency, log, and audit management.

Complete

Secure SMTP

System improvements related to email security.

In progress

FY26 Q4

NAT Gateways

Implementing a more efficient solution to maintain Network Address Translation (NAT) performance in line with growing network demands.

On hold

CI automation of AMI builds

Automate AMI build testing to improve development time for features and fixes on Silverstripe Cloud.

In progress

FY27 Q1

Vulnerability scanning

This scanning allows more visibility along with the ability to more swiftly address platform vulnerabilities as they arise.

In progress

FY27 Q2

mTLS support

Platform logging system replacement — replaces an end-of-life logging service with a modern solution designed to support evolving logging, monitoring, and observability needs.

On hold

Managed services

We provide ongoing capabilities through our managed services to support and enhance your Silverstripe-based digital experience. This category includes services that are maintained and operated by Silverstripe on your behalf—such as advanced search, content delivery optimisation, and security tooling—so your team can focus on content and strategy while we take care of performance, reliability, and infrastructure.

FY26 Q1

Basic WAF

Creates a convenient, cost-effective Web Application Firewall (WAF) service for customers on Silverstripe Cloud.

Complete

Decommission Cloudflare

Silverstripe is removing our deprecated Cloudflare WAF offering. This will lose support on 28 June 2025.

Complete

FY26 Q2

Silverstripe Search Full release

We're committed to providing the best search capabilities for your Silverstripe projects. Due to a third-party change (Elastic's deprecation of App Search), we're evolving our Silverstripe Search offering.

Complete

Dual Origin Content serving via WAF

Configuring our Premium WAF offering upon request to route traffic to different origin servers based on specific criteria, ensuring the right content is delivered from the appropriate source.

Complete

FY27 Q1

Silverstripe Search v2

We're actively developing replacements for key features like self-service dashboards, synonyms, and advanced query capabilities. These will be released as they become available.

Complete

FY27 Q2

Silverstripe Search Semantic Search and Retrieval

We're actively developing semantic search and retrieval capabilities to improve how content is matched, ranked, and surfaced based on meaning rather than keywords alone.

In progress

FY27 Q3

Silverstripe Search Natural Language Search

We're actively developing natural language search capabilities to help users search in a more intuitive way using everyday language and more conversational queries.

In progress
